

Live OEE & downtime visibility

A read-only manufacturing analytics demo built with deterministic synthetic data.
One audited OEE calculation serves both the API and decision-facing views.

DEMO URL

EVIDENCE

Synthetic data
Read-only demo
15-min cadence
No MES/sensors

One calculation path. Inspectable boundaries.

Illustrative ROI, not a savings claim

Model inputs: USD 3,500 implementation + USD 600 annual operation.
Downtime and scrap benefits are intentionally assigned USD 0.

CONSERVATIVE

\$1,462.50

annual modeled benefit

ROI -64.3%

Payback 48.7 mo

BASE

\$5,005

annual modeled benefit

ROI 22.1%

Payback 9.5 mo

UPSIDE

\$14,560

annual modeled benefit

ROI 255.1%

Payback 3.0 mo

WHAT THIS DEMONSTRATES

Deterministic OEE · auditable data contracts · visible freshness

Downtime Pareto · secure write path · reproducible synthetic feed

ROI sensitivity with explicit formulas, units and realization factors

HONEST LIMITS

Not streaming or connected to MES/sensors

Synthetic portfolio data; no client results

Render/Neon cold starts and service dependency

Power BI uses Import mode, not live streaming
